Description

Affordable, durable horns for demanding sound reinforcement applications. The re-entrant style horn flare design provides an expansion path that is longer than conventional straight horns; this ensures that the lowest possible frequency response can be achieved. The Professional PA horns are formed from lightweight aluminum and painted with a durable polyester finish, so you know that they will survive years of exposure to sun and rain. Great for indoor or outdoor applications, sturdy mounting yoke for precise alignment included. Standard 1-3/8"-18 threaded throat.

Please consider the following features:

- Excellent low-mid frequency response
- Weatherproof aluminum construction
- Steel hardware for long service life
- For indoor or outdoor applications
- Standard 1-3/8"-18 threaded throat
